

## Question 1

input equation

$$D = Z(t) \oplus (x \oplus y)$$

characteristic equation of D Flip Flop

D	Q(t+1)
0	0
1	1

$$Q(t+1) = D$$

State equation

$$Z(t+1) = Z(t) \oplus (x \oplus y)$$

$$x \oplus y = \overline{x}y + x\overline{y}$$

$$Z(t+1) = Z(t) \oplus ((x+y) \cdot (\overline{x} \cdot \overline{y}))$$

$$= (Z(t) + x + y) \cdot (Z(t) \cdot \overline{x} \cdot \overline{y})$$

$$x \oplus y = \overline{x}y + x\overline{y}$$

$$Z(t+1) = Z(t) \oplus \overline{x}y + x\overline{y}$$

$$= \overline{Z(t)}\overline{x}y + Z(t)\overline{x}y$$

A	B	XOR
0	0	0
0	1	1
1	0	1
1	1	0

$$A \oplus B = (A \text{ OR } B) \text{ AND } (\text{NOT}(A \text{ AND } B))$$

# State table

$z(t)$	x	y	$z(t+1)$
0	0	0	0
0	0	1	1
0	1	0	0
0	1	1	0
1	0	0	0
1	0	1	1
1	1	0	0
1	1	1	0

states : two combinations  
One

## State diagram

$$z(t+1) = \bar{z}(t)\bar{x}y + z(t)\bar{x}y$$

$$0 \quad 0 \quad 1 \quad 1 \quad 0 \quad 1$$

$$(y \oplus x) \oplus (z)z = 0$$

gall gall 0 to not have a direction

$$0 = (1+t)0$$

not have a state

$$(p \oplus x) \oplus (z)z = (1+t)z$$

$$(p \oplus x) \oplus (z)z = (1+t)z$$

$$(p \oplus x) \oplus (z)z = (1+t)z$$

$$(p \oplus x) \oplus (z)z = (1+t)z$$

$$(p \oplus x) \oplus (z)z = (1+t)z$$

$$(p \oplus x) \oplus (z)z = (1+t)z$$

$$(p \oplus x) \oplus (z)z = (1+t)z$$

$$\bar{p}x + p\bar{x} = p \oplus x$$

$$\bar{p}x + p\bar{x} \oplus (z)z = (1+t)z$$

$$p\bar{x}(z)z = p\bar{x} \oplus (z)z$$

## Question 2

1.

$d :: \text{Bool} \rightarrow \text{Bool} \rightarrow \text{Bool}$

$d q \text{ False} \neq \text{False}$

$d q \text{ True} = \text{True}$

$d \text{FlipFlop} :: \text{Stream Bool} \rightarrow \text{Stream Bool}$

$d \text{FlipFlop} ds = \text{tailStream } qs \text{ where}$

$qs = \text{fby nots } (dds q ds)$

$dds :: \text{Stream Bool} \rightarrow \text{Stream Bool} \rightarrow \text{Stream Bool}$

$dds = \text{lift} + 2 \text{ } d$

2.
